### Climate Action Policy

**INTEC ENERGY** recognizes that the climate crisis caused by climate change is a social and economic treat that impacts not only developing or underdeveloped economies, but also societies in all regions of the world. **INTEC ENERGY** operates in the field of renewable energy, which is the main element in the fight against the climate crisis, and acts exclusively with the commitment to produce renewable energy.

As **INTEC ENERGY**, one of our most important goals is to lead the transition to low-carbon business models with renewable energy sources in our product portfolio.

As an investment in a clean and safe environment for future generations, **INTEC ENERGY** is also committed to transitioning to 100% renewable energy throughout its lifecycle by 2030.

**INTEC ENERGY's** climate change policy has been developed in line with **INTEC ENERGY's** sustainability strategy which reinforce sustainable resource use, a culture of environmental protection and the fight against climate change.

We are making progress in reducing the environmental impact resulting from **INTEC ENERGY's** activities, protecting biodiversity, supporting sustainable development, and sharing information by challenging the expectations of each stakeholder in this area.

In line with the above factors, this Policy include the following principles:

- We provide accessible and clean energy for future generations, take action to address environmental impacts caused by climate change and support the United Nations Sustainable Development Goals
- We plan to reduce Scope 1 emissions to achieve zero carbon target (Net-Zero) in all our operations and activities by 2030.
- We monitor the global emissions market and ESG-supportive sustainable finance sector, which enables us to access the resources needed to invest more in clean energy in Turkey and abroad, and consider our investors as our most important business partners.
- We act with the understanding that one of the most important elements in the fight against climate change is transparency and we are committed to reporting all of our sustainability performance, including our environmental data, to our stakeholders through regular and accessible sources.
- To create social value and combat climate change, we support all sectoral associations, partnerships, institutions and organizations with which we collaborate, in line with common goals and evaluate opportunities for cooperation.
